Commander, We are unable to get an update today. The hospital won't give info over the phone to the nurses. It must come from case management department. (b)(6); (b)(7)(C) sent that update on Friday. That's the latest. We should get the most recent update on Monday morning. I will send her your request now so she gets it as soon as possible and gets it to us as fast as she can.

(b)(6); (b)(7)(C) dob 3/30/1961, A (b)(6); (b)(7)(C)

Good afternoon, I received the following complaint, please review and let me know his status:

Mr. (b)(6); (b)(7)(C) is a 58-year-old man who has resided in the U.S. for most of his life. Mr. (b)(6); (b)(7)(C) has a metal plate in his left leg that he received after surgery after an accident. He is experiencing immense pain in his leg and reports that while he used to receive pain medication, he stopped receiving this out of the blue. Mr. (b)(6); (b)(7)(C) additionally was diagnosed with diabetes and reports having bouts of losing his vision. When I visited with Mr. (b)(6); (b)(7)(C) at Hudson the other day he appeared unable to see properly and in pain. When I spoke to him yesterday via video he expressed deep pain and was unable to communicate with me about anything except his pain. He says he has made requests to see medical but they have gone unanswered.

I am deeply concerned about Mr. (b)(6); (b)(7)(C) health and will take appropriate action if it is not resolved soon. Please let me know how you intend to proceed.

Thank you,

I just spoke with an ICU resident Dr. (b)(6); (b)(7)(C) He will be faxing me copies of Lab work, diagnostic testing and medication lists Here is what I have learned thus far:

Above Patient is now hospitalized at JCMC after he became febrile yesterday evening and collapsed.

ICU- ROOM H-1 Nurses' Station: (b)(6); (b)(7)(C) Nurse: (b)(6); (b)(7)(C)
Attending Physician: Dr. (b)(6); (b)(7)(C) Pulmonary Critical Care
Resident Physician: Dr. (b)(6); (b)(7)(C) (b)(6); (b)(7)(C) pager
Current Diagnosis: Code Sepsis- Septic Shock source possibly enterocolitis
CT of ABD: Enterocolitis
Negative for HIV, HEP B and HEP C
Urine toxicology screen was negative for all illicit drugs.

Current Status: Awake and Alert not oriented to place.
Plan: Currently on IV antibiotics- awaiting evaluation by Dr. (b)(6); (b)(7)(C) Attending Physician

Resident Physician will inform his Attending Physician of Jail contact numbers for this provider both infirmary and private cell and infirmary nurses' station.

Resident Physician will fax above records from Patient's chart to (b)(6); (b)(7)(C) (b)(6); (b)(7)(C) Medical Administration Fax. Medical Records Supervisor to bring records to this provider as soon as received. Updates will be provided as soon as they are known throughout the weekend.

Thank you for your attention to this important matter.

According to the notes you had sent—

This detainee was seen at the clinic on 8/9/18 and 9/13/18 in addition to the xray taken on the 18th. The only medpar submitted for authorization is for the CT.

I would venture to guess that they are not willing to see the detainee due to having claims denied. Prior to detention he had insurance and I am sure they tried to bill them and when they were denied they stopped seeing the detainee.

Please submit medpars for all office visits and for the xray.

I would then send all of the authorizations to the facility so they can submit claims.

There are instructions on the authorizations on how to submit the claims. I would expect they are already in the VA system (which is who pays ICE claims) so they should get paid.

Given there is a referral in his medical record and it has not be completed timely, I would ask the provider to make a note in the chart that this referral is not urgent and if needed the provider may need to see the patient again to ensure it is not an urgent referral.

Once you have sent the authorizations to the offices (ortho and radiology) then I would ask to reschedule. If they say no, then I would schedule with the other ortho office that you use. If that appointment is 2 months out, then you might see if there is another ortho provider that will see the patient.

All,

I did contact this facility and spoke with (b)(6); (b)(7)(C) I sent her all the needed forms to get enrolled in the ICE insurance program. They had no paperwork or authorization sent with this CT request and that is why it was not completed. However, they did complete x-rays so please call and get those sent to you. Meanwhile you can do the referral for a CT now, enter it into MedPAR for approval first, then once you get an authorization, send it with the detainee for a CT. Also if he needs referred to an orthopedist, then follow the same process if he is already enrolled. If not already enrolled then let us know so we can get them the needed forms to get enrolled and be paid. Let me know if you have any questions.

(b)(6); (b)(7)(C)

Subject: Re: Detainee with recent broken wrists medical update needed

As explained by (b)(6); (b)(7)(C) the facility is declining to perform CT , based on patient's insurance ineligibility (Brookdale is talking about his private insurance)

(b)(6); (b)(7)(C) called the facility twice, referred to radiology supervisor . She has already explained he is an ICE detainee.

As of now , I cannot provide a definitive answer regarding when the test will be done and further follow up scheduled either.

I believe ICE should contact the facility and confirm that all procedures/ tests/ follow up visits will be paid by ICE.

All,

I received the below email from DO (b)(6); (b)(7)(C) and ask that you provide me with his medical record and with a medical update to answer the below questions:

- Is this detainee being followed by the medical clinic for his recent wrist fractures?
- What is his plan of care? Has he been referred and seen an orthopedic specialist?
- According to notes in EARM he was taken to an appointment at One Brookdale Plaza CHC BLDG, 2nd floor, Station L on 10/11 only to be rescheduled on 10/18 and then turned away without being seen due to insurance questions (see below), can someone explain what that means...did he have a MedPAR created? I do not see a referral in the system on my side.

Thanks in advance for your assistance.

Subject: FW: (b)(6); (b)(7)(C) appointment on 10/11/2018 @ 10am at One Brookdale Plaza CHC BLDG 2nd floor Station L Brooklyn NY

Good morning all,

I am not sure that this subject is on anyone's radar. I don't believe he is on the list of NYC significant medical cases. The subject entered custody with both wrists having been recently fractured.

We encountered him at the facility and he appears to have still have significant issues with his wrists.

He went to the below appointment and claims that he wasn't seen because his "private insurance wasn't accepted."

On Mar 16, 2018, at 1:10 PM, [REDACTED] wrote:

Good afternoon, I received the following concerning this detainee, can you let me know his status regarding the head injury complaints?

I am writing regarding our client [REDACTED] I met with Mr. [REDACTED] today at the Hudson County Correctional Facility (HCCF) and am extremely concerned about his medical condition. As you all know, Mr. [REDACTED] suffered a fall in the facility and hit his head. My understanding is that this fall took place in or about a couple of weeks ago. Our client is not able to read and write and suffers from cognitive limitations so I was not able to ascertain the exact date of the fall.

Our client reported to me today that he has had persistent headaches since the fall in both the front and back of his head. Due to his cognitive limitations, I asked our client to point to where his head is hurting and he pointed to the forehead, both sides of the head and the back of his head. He advised that he has only received one pill but that has not alleviated the pain. Our client also is only Spanish speaking and therefore I am also concerned about whether the medical staff at the HCCF has been able to effectively communicate with him in order to ensure that his medical needs are properly attended to following a fall that has impacted his head.

As I know you all understand, head injuries must be attended to in a manner that fully explores and addresses any and all pain and symptoms. Therefore, Mr. (b)(6); (b)(7)(C) should be immediately sent for an MRI and/or a MRI should be conducted by the HCCF. If it is not possible to arrange for a MRI at the HCCF and/or an outside provider, Mr. (b)(6); (b)(7)(C) should be released so that we can assist him with accessing the necessary medical care that is required following a fall and impact to an individual's head.

Good Morning,

On date of incident, patient was evaluated, exam showed no abnormalities, he was monitored in medical housing for 3 days for complaint of hitting head. During that time neuro checks were within normal limits.

Patient was evaluated on last evening by NP. Language line was used for interpretation, during the call the interpreter asked the patient to speak a little louder, patient got angry, left the room.

From the assessment and evaluation the NP was able to perform patient was complaining of elbow and back pain. Previous record from 8/22/17 shows that patient was diagnosed with epicondylitis (degeneration of tendon around the elbow). Patient was ambulating with steady gait.

X-ray of lumbar spine and analgesic was ordered.

Please let me know if you have any further questions.

Subject: RE: EXTERNAL (b)(6); (b)(7)(C)

Good afternoon, I received the following concerning this detainee, can you let me know his status regarding the head injury complaints?

I am writing regarding our client (b)(6); (b)(7)(C). I met with Mr. (b)(6); (b)(7)(C) today at the Hudson County Correctional Facility (HCCF) and am extremely concerned about his medical condition. As you all know,

Mr. (b)(6); suffered a fall in the facility and hit his head. My understanding is that this fall took place in or about a couple of weeks ago. Our client is not able to read and write and suffers from cognitive limitations so I was not able to ascertain the exact date of the fall.

Our client reported to me today that he has had persistent headaches since the fall in both the front and back of his head. Due to his cognitive limitations, I asked our client to point to where his head is hurting and he pointed to the forehead, both sides of the head and the back of his head. He advised that he has only received one pill but that has not alleviated the pain. Our client also is only Spanish speaking and therefore I am also concerned about whether the medical staff at the HCCF has been able to effectively communicate with him in order to ensure that his medical needs are properly attended to following a fall that has impacted his head.

As I know you all understand, head injuries must be attended to in a manner that fully explores and addresses any and all pain and symptoms. Therefore, Mr. (b)(6); should be immediately sent for an MRI and/or a MRI should be conducted by the HCCF. If it is not possible to arrange for a MRI at the HCCF and/or an outside provider, Mr. Perez should be released so that we can assist him with accessing the necessary medical care that is required following a fall and impact to an individual's head.

Good Morning,

On date of incident, patient was evaluated, exam showed no abnormalities, he was monitored in medical housing for 3 days for complaint of hitting head. During that time neuro checks were within normal limits.

Patient was evaluated on last evening by NP. Language line was used for interpretation, during the call the interpreter asked the patient to speak a little louder, patient got angry, left the room.

From the assessment and evaluation the NP was able to perform patient was complaining of elbow and back pain. Previous record from 8/22/17 shows that patient was diagnosed with epicondylitis (degeneration of tendon around the elbow). Patient was ambulating with steady gait. X-ray of lumbar spine and analgesic was ordered.

Please let me know if you have any further questions.

Respectfully,

(b)(6); (b)(7)(C)

Subject: EXTERNAL: (b)(6); (b)(7)(C)

Good afternoon, we received the following, can you check on him and let me know his status ?

Today, our office was informed of an incredibly disturbing series of incidents that my client, Cesario Perez Lopez, suffered while in ICE custody at Hudson County Jail. Last week, my client — who was granted asylum on 1/11/18 and has yet to be released from ICE custody — fell while cleaning the facility. As a result of his fall, several parts of his body are now injured. However, when he asked to see a doctor, he was punished and put in solitary confinement/isolation for three days.

Vision Acuity Exam

Acuity in Left Eye: OS 20/ 40
Acuity in Right Eye: OD 20/ 40
Acuity in Both Eyes: OU 20/ 40

03/14/2018 at 6:58 AM—Provider Sick Call

Chief Complaint: complaint of low back pain

Additional Subjective Complaints: also complained for neck pain, elbow and wrist

History of Present Illness: with details regarding duration, frequency, relieving and worsening factors, etc. This is a thirty four year old male referred for complaint of back pain.

As per the patient he slipped and fell in water approximately one week ago. he was housed in the infirmatory for a few days and was treated with tylenol and NSAIDs.

Today he is complaining for neck, right elbow and low back pain.

review of the patient's chart shows that he was previously seen on 8.22.17 by Dr. (b)(6); (b)(7)(C) for Epicondylitis.

Assessment Comments: patient is here for evaluation of back pain.

Language line used for interpretation, during the interaction the interpreter tried to advise the patient that he was unable to hear what he was saying and to speak louder. The patient then got off the chair in anger and started to exit the room.

noted ambulating with a normal gait.

has some mild effusion to right elbow but has a hx of epicondylitis as per Dr. (b)(6); notes.

Will order x-ray of the lumbar spine and refer the patient to Dr. (b)(6); for additional evaluation.

Will also order Tylenol 500mg by mouth BID as needed x 10 days

03/16/2018 at 4:18 PM—PROVIDER

General Note

General Note Type: Medical ALP

Brief Subject (20 Characters Max): MEDICAL FOLLOW UP

PATIENT BEING RE-EVALUATED.

S/P FALL 2 WEEKS AGO, WHILE IN THE BATHROOM. STATES THAT HE SLIPPED, FELL ON HIS BACK WITH HEAD HITTING THE FLOOR.

DENIED LOC, STATES THAT HE STOOD UP IMMEDIATELY ON HIS OWN.

WAS SEEN BY PROVIDER THE SAME DAY , C/O RT WRIST PAIN / LOWER BACK PAIN AT THAT TIME . WAS PLACED IN INFIRMARY ON OBSERVATION WHERE HE REMAINED FOR 2 DAYS.

HE HAD **XRAY OF LS SPINE DONE TODAY , REPORT NEGATIVE FOR FX.**

WALKED FROM THE TIER TO THE MEDICAL DEPARTMENT TODAY . NOT LIMPING.

ON EXAM HE C/O MILD PAIN 4-5/10 OF LUMBAR SPINE AT L4 -L5 LEVEL.

WHEN ASKED IF HE HAD BLURRED VISION, HE STATED THAT HE WEARS GLASSES. SNELLEN TEST PERFORMED 20/25 RT , 20/20 LEFT.

HE DENIES PAIN OF THE RT WRIST TODAY.

HE C/O INTERMITTENT HEADACHE GRADED 4-5/10 RELIEVED BY TYLENOL GIVEN PRN , ALSO C/O DIZZINESS WHEN STANDING UP FROM SITTING POSITION , UNCHANGED SINCE FALL AS PER PATIENT . DENIES NAUSEA/VOMITING/ LOC.

VSS : 130/80 70

XRAY SPINE REPORT REVIEWED WITH PATIENT, VERBALIZED UNDERSTANDING RESULT IS NEGATIVE FOR FX.

SPINE : FULL ROM ,ABLE TO BEND FORWARD WITHOUT PAIN.

MILD PAIN ON PALPATION LUMBAR SPINE AT L4-5 LEVEL.

RT WRIST ; FULL ROM / NO TEND. ON PALPATION.

A/P : S/P FALL W/ C/O HEADACHE , DIZZINESS.

REFER TO ER JCMC FOR FURTHER EVAL.

PATIENT UNDERSTANDS PLAN OF RX.

03/16/2018 at 10:25 PM—PROVIDER

Brief Subject (20 Characters Max): hospital return. This 34 y/o male returned from JCMC c/o pain in his back. Denies any headache or dizziness at this time.

. PT observed ambulates with steady gait in no acute distress

CT scan of head w/o contrast result showed no acute intracranial hemorrhage, no acute infarction or mass.

Xray of L-spine result showed spinal bifida occulta at the L4 level. No fx or bone destruction are seen.

Disc spaces are intact.

It is to be controlled, stored, handled, transmitted, and disposed of in accordance with DHS policy relating to FOUO information and is not to be released to the public or other personnel who do not have a valid 'need-to-know' without prior approval of an authorized DHS official. No portion of this report should be furnished to the media, either in written or verbal form.

From the attorney:

In the meantime, I met with Mr. (b)(6); (b)(7)(C) on July 27, 2018 at the Hudson County jail. He is not doing well. As you know, he was born in 1943 and is 75-years-old. He suffers from numerous serious health conditions that have worsened significantly in recent months. First, he is losing his eyesight. He was unable to see any writing on a form I had him sign and said that my face was blurry. He could barely see his surroundings. Apparently he was supposed to have surgery on July 16 because he has cataracts. However, the surgery was cancelled and he was provided no explanation why. I am extremely concerned about the potential risks to an elderly and partially blind man navigating around the jail setting alone.

Second, he was extremely short of breath from walking to the professional visit area. It took several minutes for him to recover his breath, breathe normally and be able to speak to me. I have never seen him like this before (having worked with him over two years) and was very alarmed. He also informed me that one week prior, roughly 7/20/18, he blacked out and fell at the jail. He was taken to the emergency room at an outside hospital and diagnosed with pneumonia. Apparently he has been taken to the hospital approximately two times per month in the last several months due to his asthma and poor breathing and received an MRI (although he was unaware of the results of this evaluation). Again, Mr. (b)(6); (b)(7)(C) is extremely vulnerable and a health complications like asthma and pneumonia carry greater risks for someone in his position.

Finally, he continues to suffer from a heart condition after having had three heart attacks, high blood pressure and severe asthma requiring use of an oxygen machine. His arms were covered in bloody bruises apparently from receiving intravenous antibiotics.

I am very concerned that Mr. (b)(6); (b)(7)(C) is not receiving proper medical care and needs to have eye surgery as soon as possible.

Without a doubt he does not have acute ax that would warrant inpatient psych hospitalization.

He does appear to be limited intellectually based on what the Spanish speaking clinician has said about the content of his speech.

Thank you.

(b)(6); (b)(7)(C) Upgraded to Q15 Level 1

Good Morning Cmdr (b)(6);
(b)(7)(C)

I was going to email you about this detainee. Since his arrival in the facility he has been a bit of a problem to manage. I originally emailed you about him, as he was held in a juvenile detention center, and the day after his 18th birthday was sent to Hudson. He is only Spanish speaking and upon his arrival there was a question about his intellectual ability. He was given the opportunity to reside in regular housing and within a day or two was openly masturbating and sent to a watch on medical. After a short time in medical, he was return to regular housing and got into a fight with another detainee. He was again returned to medical on a watch with disciplinary charges. I was hesitant to clear him for lock-up status given his young age and apparent cognitive limitations, but eventually cleared him to give it a try. After a few days there he assaulted an officer (it was captured on video) and was again returned to medical on a watch, were he has been housed for the last week. Questions to him regarding his behavior yield responses that have little substance. He often contradicts himself. two days ago, while on a Level 2 close watch (which means he has his clothes) he went into the cell of another person on watch, disrobed, and put on the suicide gown of the other person. When asked why he did this, he indicated it was because he said he should.

There is a housing unit at Hudson for IMs who have special needs (D1W). From a level of functioning standpoint, he would be better housed in a setting of that sort. However, his ICE status prevents him from housing in that area. He is a young, intellectually limited male whose problems are not psychiatric, but more cognitive/judgment and behavior/impulse control. I am not sure if this setting is a good one for him. I am hesitant to clear him to go to lockup as it is less supervised than in medical. With respect to tying a shirt around his neck, I again think that is more behavioral than a reflection of mental illness or suicidal intent.

I am not at the jail this am, or I would have given you specific dates about his housing changes.

Please let me know what you think.

Detainee (b)(6); (b)(7)(C) returned from JCMC ER and refused all care at the ER. He refused to sign the AMA and was discharged. The detainee was seen and evaluate by the NP on return and refused care. He stated he "wanted to talk to his wife." He is scheduled for follow up evaluation tomorrow. Last blood sugar taken when returned from the Hospital 355mg/dL and treatment was refused.

Subject: RE: EXTERNAL:RE: Hospital Visit

Patient return from JCMC at 11:45PM. Diagnosis of vaginal bleeding, hemaglobin12.6 and ultrasound was negative as per hospital discharge paperwork. Patient was medically cleared for incarceration with order for Tylenol 650mg by mouth as needed and to follow-up with OBGYN. Patient still complains of vaginal bleeding and mild lower abdominal cramp. Patient was examined and no bleeding noted on the pad. Patient was kept in medical for 6hrs observation and reexamine again for bleeding, noted red spot on the pad without active bleeding and that was witnessed by the charge nurse. Patient was transferred to GP in stable.

Fyi I checked in the ICE database, there is a picture of him dated 10/26/2015, with facial drooping as well, but not as pronounced as his picture dated 8/8/2017

Thank you for the records, is he on any mental health medications, or has he seen the psychiatrist? I didn't see any in the records that were sent.

Years Old DOB: 09/22/1982
Race: White Gender: Male LOC: D 3E 311 02 Inmate Type: ICE HLCN: HCCC A#:
(b)(6); (b)(7)(C)

Date: 03/27/2018

Time Code Called: 9:10pm. Responded to code white, patient found sitting on a chair, by the sally port, complaining of chest pain, mid-sternum area, and patient observed guarding his chest area, no SOB, no diaphoresis, no acute distress observed.

Ice Patient's Up-Date

Pt seen today in the medical clinic for c/o epigastric pain that started today. Inmate reported he was on the phone anxious and started having epigastric pain. Inmate states the pain is subsiding. Maalox 30ml po stat given and inmate also referred to MH.

A/P:Epigastric pain

Maalox 30ml by mouth stat

Stat EKG - Wnl

Patient education:

Return to clinic as directed.

Seek medical attention if symptoms worsen.

Patient verbalized understanding.

Mental Health--Subjective

Presenting or Current Problems: The inmate was referred to mental health after being cleared by nursing and the language line was called for Greek interpretation. The inmate explained that he has been receiving ongoing advice from his attorney for which he admits that the attorney has indicated for him to remain patient and not get into elaborate conversations regarding the status of his case. The inmate explains that has had detailed conversations about his case with his wife for which he reports it was his decision to not follow the advice set forth by his attorney. The inmate explains that his wife keeps pressuring him to make a choice for which he reported here that he does not want to give any specific details. The inmate reports that the wife's pressuring causes him distress for which he admitted here he is choosing not to tell the attorney of the pressure his wife places on him. The inmate states that the staff at the facility asks him too many questions when he is feeling distressed and that he never requested the services, intervention and/or involvement of the mental health department. The inmate reports that the staff here at the facility often does not understand him for which he revealed here that it could be due to a language barrier. The inmate reports that he does not set, boundaries, parameters and/or limits with his wife regarding the depth of their discussions regarding his legal case even though he claims that it has been causing him stress. The inmate reported that he receives the attention from the officers, nursing and mental health by his prior verbiage of going on hunger strike or tonight when he grabbed his chest after a phone conversation with his wife. He states that he gets angry with the staff making assumptions, but he reported here that he chooses not to reveal the entire problem(s) that he is experiencing but he offered no specific examples of the staff's assumptions.

Ice Patient's Up-Date

Assessment

Impression: The inmate was offered and declined supportive counseling. He states that at times he does not understand what is being asked. Inmate was informed that moving forward mental health would recommend using the language line for any referral to the department. The inmate denied that the chest pain was related to panic symptoms. Inmate denies having a current mental health crisis, emergency and/or deterioration. Inmate denies suicidal and/or homicidal ideation, intent or plan. Inmate denies having a death wish. Inmate denies preoccupation with death or dying. Inmate denies current feelings of guilt, shame or doubt. Inmate denies crying spells. Inmate denies social withdrawal. Inmate denies despair. Inmate denies panic symptoms. Inmate denies racing thoughts. Inmate denies feelings of hopelessness or helplessness. Inmate denies paranoid ideation or suspicion. Inmate denies hallucinations.

Stable

Plan

No Mental Health Intervention

Ice Patient's Up-Date

7. (b)(6); (b)(7)(C) Commitment# (b)(6); (b)(7)(C) SBI# (b)(6); (b)(7)(C) 36 Years Old DOB: 02/08/1982

Race: Hispanic Gender: Male LOC: C 1E 113 03 Inmate Type: ICE HLCN: HCCC A#: (b)(6); (b)(7)(C)

Brief Subject (20 Characters Max): provider sick call

S: 36 yrs old Hispanic male seen today for complaints of chronic headache not relieved by current pain regimen. Inmate appears stable, in no acute distress. Communicated with inmate via a Spanish interpreter # 252386. Inmate reported that he had Hx of head trauma in 2015 and as a result was in coma for one month at Bay Shore hospital in NY. Inmate added that he was not having headache on the street but started having severe headache since incarceration -about 5 months now. States the headache starts from the occipital region of his head and radiates to the back of his right eye, forehead and parietal region of his head. Currently, inmate is on Excedrin twice daily as needed for headache but states it is not relieving his headache. Reported his pain scale is 10/10. No facial grimacing or any sign of pain observed during consultation. Mood, affect and vital signs are wnl.

Vitals: BP= 110 / 60 ,P= 63 ,RR= 16 ,T=98, 02 sat 99% r/a

A/Headache

Continue current regimen - Excedrin extra strength 250-250-65mg by mouth twice daily prn

- Add Ibuprofen 600mg by mouth twice daily as needed with meal for breakthrough pain
- Referral to UH Neurology for evaluation
- trip / CX sheets completed
- Patient education:
- Take all prescribed medications.
- Return to clinic as directed.
- Seek medical attention if symptoms worsen.

Patient verbalized understanding.

Good afternoon,

The above detainee is c/o excruciating RUQ pain. He was thoroughly examined this morning, with pending labs and other tests.

I am forced to transfer him to JCMC for further evaluation.

Best Regards,

(b)(6); (b)(7)(C) **M.D.**

Good morning,

The above detainee was admitted last night to HCC with a diagnosis of liver cirrhosis 2/2 to ETOH abuse, placed in the Medical unit (infirmary) on observation around 3:00 AM.

Upon examining / questioning this morning he gave me the following info:

-Hx of upper GI bleed for which he was admitted at LIJ hospital. Said had upper endoscopy, does not know the result. States was seen on f/u by a GI specialist , does not remember the name either.

He also provided a pharmacy named (b)(6); (b)(7)(C) in Bellerose NY. Awaiting for them to open to verify if he has filled his meds.

He is also c/o RUQ pain, chronic.

He came with some loose pills purchased in India .

We have not received any significant medical records from ICE. He was cleared for incarceration by ICE.

Best Regards,

(b)(6); (b)(7)(C)

or an effort to provide complete medical care. In most cases, you must let your doctor check you again. Tell your doctor about any new or lasting problems and please make sure your doctor gets the results of any tests done today. We cannot recognize and treat all injuries or illnesses in one Emergency Department visit. If you had special tests, such as EKG's or XRAY's, we will review them again within 24 hours. We will call you if there are any new suggestions. After you leave, you should follow the instructions below.

You may have been seen by a Physician Assistant or Nurse Practitioner while visiting the Emergency Department. The Physician Assistants and Nurse Practitioners work under the direct supervision of the Emergency Department Physician.

After leaving the Emergency Department, follow the instructions below.

Patient Education Materials

The following Patient Education Materials have been given to the patient:

Nutrition

Gastroparesis

Gastroparesis, also called delayed gastric emptying, is a condition in which food takes longer than normal to empty from the stomach. The condition is usually long-lasting (*chronic*).

CAUSES

This condition may be caused by:

- An endocrine disorder, such as hypothyroidism or diabetes. Diabetes is the most common cause of this condition.
- A nervous system disease, such as Parkinson disease or multiple sclerosis.
- Cancer, infection, or surgery of the stomach or vagus nerve.
- A connective tissue disorder, such as scleroderma.
- Certain medicines.

In most cases, the cause is not known.

RISK FACTORS

This condition is more likely to develop in:

- People with certain disorders, including endocrine disorders, eating disorders, amyloidosis, and scleroderma.
- People with certain diseases, including Parkinson disease or multiple sclerosis.
- People with cancer or infection of the stomach or vagus nerve.
- People who have had surgery on the stomach or vagus nerve.
- People who take certain medicines.
- Women.

SYMPTOMS

Symptoms of this condition include:

- An early feeling of fullness when eating.
- Nausea.

Person Full Name (b)(6); (b)(7)(C)
FIN NBR (b)(6); (b)(7)(C)

02/11/2018 10:56:50
Date of Birth 07/12/1977

3 of 10

- Weight loss.
- Vomiting.
- Heartburn.
- Abdominal bloating.
- Inconsistent blood glucose levels.
- Lack of appetite.
- Acid from the stomach coming up into the esophagus (*gastroesophageal reflux*).
- Spasms of the stomach.

Symptoms may come and go.

DIAGNOSIS

This condition is diagnosed with tests, such as:

- Tests that check how long it takes food to move through the stomach and intestines. These tests include:
 - Upper gastrointestinal (GI) series. In this test, X-rays of the intestines are taken after you drink a liquid. The liquid makes the intestines show up better on the X-rays.
 - Gastric emptying scintigraphy. In this test, scans are taken after you eat food that contains a small amount of radioactive material.
 - Wireless capsule GI monitoring system. This test involves swallowing a capsule that records information about movement through the stomach.
- Gastric manometry. This test measures electrical and muscular activity in the stomach. It is done with a thin tube that is passed down the throat and into the stomach.
- Endoscopy. This test checks for abnormalities in the lining of the stomach. It is done with a long, thin tube that is passed down the throat and into the stomach.
- An ultrasound. This test can help rule out gallbladder disease or pancreatitis as a cause of your symptoms. It uses sound waves to take pictures of the inside of your body.

TREATMENT

There is no cure for gastroparesis. This condition may be managed with:

- Treatment of the underlying condition causing the gastroparesis.
- Lifestyle changes, including exercise and dietary changes. Dietary changes can include:
 - Changes in what and when you eat.
 - Eating smaller meals more often.
 - Eating low-fat foods.
 - Eating low-fiber forms of high-fiber foods, such as cooked vegetables instead of raw vegetables.
 - Having liquid foods in place of solid foods. Liquid foods are easier to digest.
- Medicines. These may be given to control nausea and vomiting and to stimulate stomach muscles.
- Getting food through a feeding tube. This may be done in severe cases.
- A gastric neurostimulator. This is a device that is inserted into the body with surgery. It helps improve stomach emptying and control nausea and vomiting.

HOME CARE INSTRUCTIONS

- Follow your health care provider's instructions about exercise and diet.

Person Full Name (b)(6); (b)(7)(C)
 FIN NBR (b)(6); (b)(7)(C)

- Take medicines only as directed by your health care provider.

SEEK MEDICAL CARE IF:

- Your symptoms do not improve with treatment.
- You have new symptoms.

SEEK IMMEDIATE MEDICAL CARE IF:

- You have severe abdominal pain that does not improve with treatment.
- You have nausea that does not go away.
- You cannot keep fluids down.

This information is not intended to replace advice given to you by your health care provider. Make sure you discuss any questions you have with your health care provider.

YOU ARE THE MOST IMPORTANT FACTOR IN YOUR RECOVERY.

Follow the above instructions carefully. Take your medicines as prescribed. Most importantly, see a doctor again, as discussed. If you have problems that we have not discussed, call or visit your doctor right away. If you cannot reach your doctor you may return to the Emergency Department. We may have provided you with a referral for one of our on call physicians who can provide the non-emergent follow up care needed for your specific medical problem. Please note that this physician may not be a participating provider in your health plan. Before making an appointment, we suggest that you first contact your health insurance plan or primary care physician to clarify this status. If our on call physician is not a participating provider in your health plan, your health insurance company or primary care physician may prefer that you are seen by another physician whose services would be covered by your insurance. Although our on call physician is willing to see you for a follow up visit, you may have responsibility for the bill if he/she is a non-participating physician in your plan.

As always, our Emergency Department remains available to you should your condition change and warrant further evaluation.

The RWJBarnabas Health Link: In the event that you need assistance finding a doctor to meet your needs, or a doctor that accepts your insurance plan, the RWJBarnabas Health Link program can help you. We invite you to call the toll free number a (b)(6); (b)(7)(C) available to you 7 days a week, 24 hours a day, with bilingual personnel available. The service can assist you with referrals or making appointments to specialists, general practitioners or surgeons. The service can also provide easy registration information for health care education programs, support groups and screenings.

We hope you find this guidance helpful and we thank you for choosing Jersey City Medical Center for your health care needs.

If you need to obtain copies of your x-rays please call 201-915-2151. They will need 24 hours' notice to print your films. There may be a fee for the films.

If you need to obtain your Lab results, you may go to the main lab, on the ground floor. You will be asked to sign a release and receive a copy of any lab work done. The lab is open Monday through Saturday 7am to 9pm.

Smoking/Tobacco/Second Hand Smoke:

Be aware that smoking, use of tobacco, and exposure to second hand smoke may cause the following: Lung Disease, Lung Cancer, and/or Heart Disease. Exposure to smoke may also cause irritation of the lungs, leading to coughing, excessive phlegm, and chest discomfort and chest pains, which may affect the heart.

Second Hand Smoke also affects children.

Children who breathe second hand smoke are more likely to suffer from pneumonia, bronchitis, SIDS, asthma, and other lung diseases. They may also have more ear infections.

For further information on tobacco dependency programs contact:

Tobacco Dependency Treatment Program – (b)(6); (b)(7)(C)

Quit Line: (b)(6); (b)(7)(C)

For more information on Advance Directives please contact the New Jersey Department of Health.

<http://nj.gov/health/advancedirective/>

Seatbelts:

There is no doubt that seatbelts save lives. Everyday people not wearing seatbelts are more severely hurt in crashes. Buckle up to reduce your chances of severe injury.

exam done. Information taken from external source(s).

Immediately prior to procedure a "time out" was called to verify the correct patient, procedure and site. Ultrasonic guidance by me for vascular access shows patent right brachial vessel, with concurrent ultrasonic visualization of needle entry into that vessel. Medically necessary after failed attempts by nursing staff.

Treatment instituted Protonix 40 mg IV and IV NS 2L. Order placed for transfusion of 2 units PRBC's. Rectal temp reported as 93.7. Bair hugger placed. Decision made to obtain prior medical records. Prior records not found.

Orders written. Case discussed with ICU. Surgery called for consult.

Hgb/Hct: 4.0/11.8 reported. ICU at the bedside. Massive transfusion protocol activated at 0755 hrs. FFP two units ordered.

Case discussed with surgery 0757hrs.

Surgery evaluated the patient at 0845hrs and recommended ICU admission with GI consult.

Patient noted with a creat: 2.5; abd CT reordered as noncontrast study.

Patient re-evaluated and observed at bedside multiple times for subsequent response to continuing treatment. Lab tests reviewed. X-Rays reviewed. Monitor checked for vital sign trends and cardiac rhythm. Records and documentation completed.

Total physician critical care time 35 minutes exclusive of separately reportable procedures.

After the evaluation in the Emergency Department, my clinical impression is GI bleed, melena.

PLAN: Patient was admitted to the ICU under Dr. (b)(6); (b)(7)(C)

The documentation recorded by the scribe accurately reflects the

Comment

46 y/o M with PMH of DM, liver cirrhosis and GI bleed presented to ER with c/o black tarry bowel movement 4 times since yesterday. Pt reports of associated dizziness and headache with weakness. Pt mention of prior h/o GI bleed about 6 months ago with hematemesis and underwent EGD, but unsure of the result. Pt also reports of similar presentation back in Jan, which resolved without seeking medical help. While in the ER SBP was in 60's and received 2 L bolus with 1 PRBC.
 Pt denies nausea/vomiting, BRBPR, CP, SOB, palpitation, pain abdomen, LOC.

During evaluation, pt BP dropped to 53/47 associated with dizziness and massive transfusion was called. Pt received 5 PRBC and 2 platelet and 2FFP each with some improvement of BP to SBP 90's, labs noted for Hb of 4 with INR of 4.5 and platelet of 50. Pt continue to have several episodes of melena with significant amount and another 2 unit PRBC and 2 unit FFP was transfused.

Surgery was also consulted while in the ER and placed a NG tube with return of blood

MICU consulted for symptomatic anemia with active GI bleed

Pt Name: (b)(6); (b)(7)(C)
 Rm/ Bed: ICU30

MRN: (b)(6);

Critical Care Medical (Progress Note) - Inpatient SOAP Note

continued from previous page

Collected On: 06/10/2017 09:06

Neuro:
 GCS 3 T
 mutisystem involvement with very poor prognosis

Respiratory:
 pt intubated during EGD for airway protection
 CXR b/l infiltrates
 Pt going into ARDS requiring high PEEP and FIO2

GI:
 melena likely from upper GI bleed
 several episode of melena while in the ER
 labs noted for Hb of 4 >6.2>8->10.6->9.3, with INR of 4.5>4.35>2.8>2.5>3.81 and platelet of 50>80
 AST: 3593->, alt: 1690
 BILI 4,6
 Pt went hemorrhagic shock and had massive transfusion.
 in total received 10 PRBC, 5 FFP and 3 platelet, will transfuse another 2 UFFP today as per GI
 still hypotensive initially with MAP low 60 to 50's and staretd on pressors prior to EGD
 GI bleed is suspicious of upper GI, potentially variceal bleed, in the context of liver cirrhosis as evident from the LFT and history
 Dr. (b)(6); (b)(7)(C) consulted, ans EGD done at the bed side showed blood clot in the esophaguS with significant collection of blood, lost about 1 L.during the procedure, grade 1 varice with sclerosing agent injected around the lower esophagus
 Significantly worsening of LFT
 Pt currently DNR with no aggressive management considering the futile status with very poor prognosis
 c/w supportive and comfort

Cirrhosis:
 unknown etiology likeley alcohol as pt admitted to excessive drinking prior to intubation
 worsening LFT
 shock liver from hemorrhagic shock!
